SUMMARY

Senior Software Engineer with 6 years building scalable web, mobile and cloud platforms with React/Next.js, React Native (Expo), NestJS and ASP.NET Core / .NET. Delivered high-availability products for 10k+ daily users and multi-tenant healthtech SaaS with 50+ paying clinics. Strong in microservices, RabbitMQ, PostgreSQL, query optimization, CI/CD (GCP, GitHub Actions) and AI integrations (LLM streaming, speech-to-text). Fintech, healthtech and SaaS.

EXPERIENCE

Senior Software Engineer

Sep 2025 - Present

Spesia

- Cut clinical patient search from minutes to 1–3 seconds on a large medical dataset by introducing full-text search, indexes and query optimization across NestJS services
- Integrated Spesia-built LLM and speech/transcription models into NestJS + Next.js workflows so clinicians get case-specific insights in a few clicks instead of heavy Tasy/external system lookups
- Architected and evolved 9 NestJS microservices (DDD, TDD with Jest, RabbitMQ messaging, Saga) for an AI-assisted oncology treatment platform with Barramento Selena (SUS), Mevo and Lya Health integrations
- Improved legacy clinical screens and product UX so oncologists access patient data and generate treatment proposals with less friction in agile Scrum/Jira delivery
- Configured LLM data streaming, app contexts and MCP-oriented integrations for model communication in production-like research environments
- Repeatedly rebuilt and evolved GCP CI/CD (tests, container builds, GKE-oriented deploys) during the platform migration to Google Cloud for a ~100-physician Med4u research pilot

Full Stack Developer

Sep 2022 - Sep 2025

Penseapp

- Supported 10k+ daily users across commerce, toll-tag and meal/points products with low-latency, high-availability design (Nginx, horizontal scaling, caching, streaming and geolocation)
- Cut card-loading from over 1 minute to near-instant by adding indexed search and server-side preloaded cache
- Architected and evolved React Native (Expo) apps (App Store / Google Play) and Next.js web platforms with Firebase and multi-tenant Keycloak across products
- Built and maintained APIs/microservices in NestJS and C# .NET (2.1 → 6.0 → 8.0), from monoliths to service-oriented backends with PostgreSQL, MongoDB, Redis and RabbitMQ
- Shipped web and mobile releases on 3–6 month cycles with GCP deploys, owning full-stack delivery across mobile, web and backend
- Integrated OpenAI agents with custom prompts for language-learning assistance, using speech recognition to suggest higher-value vocabulary for users

Backend Developer

Nov 2021 - Jun 2022

Atos Capital

- Maintained high-volume fintech backends in C# .NET Core, resolving critical production issues that impacted transactional stability
- Automated NFC-e integration via web scraping of government and banking portals for the fiscal workflow
- Evolved SQL Server and Oracle reporting queries on multi-million-row datasets for fiscal and financial operations

Software Developer Intern

May 2021 - Oct 2021

Avonale WorkPlace

- Built C# .NET MVC APIs on the FANDI vehicle financing platform
- Integrated microservices and external APIs to consume third-party services in the credit flow
- Created and optimized SQL Server queries (stored procedures, transactions and indexes) for financial processing

PROJECTS

Clinical System

Multi-tenant dental clinic SaaS | Senior Full Stack Developer — clinicalsystem.com.br

- Designed and launched a multi-tenant dental SaaS with 50+ paying clinics (~2 users/clinic), owning ASP.NET Core Clean Architecture and Next.js end to end (~50/50 split)
- Built Cloudflare/Whisper AI flows so dentists record consults and get transcription, summary, and optimized clinical evolution text in product workflows
- Streamed and stored large medical files (500MB–GB), including DICOM → 3D viewing for patients, with daily backups on object storage
- Implemented RabbitMQ async workers (retry/DLQ), scheduling, payments (Asaas), S3 storage and Autentique e-sign while keeping the system light and highly available
- Automated CI/CD with GitHub Actions (build image → DigitalOcean VPS via SSH pull/update) under Scrum/ClickUp
- Live: <https://clinicalsystem.com.br>

MakeBio

Creator profile and conversion-link SaaS | Full Stack and Infrastructure — makebio.com.br

- Shipped a production creator-link SaaS on Next.js with TanStack Query, Zod, React Hook Form, Zustand and custom hooks for profile pages and conversion links
- Implemented Auth.js and Better Auth with Prisma/PostgreSQL persistence and Stripe subscriptions with validated webhooks
- Built GitHub Actions CI/CD with containerized VPS deploys and Cloudflare CDN/DDoS protection on a custom domain
- Used as a live research/portfolio product to validate full-stack SaaS delivery end to end
- Live: <https://www.makebio.com.br>
- GitHub: <https://github.com/matheus55391/lnkcore>

TECHNICAL WRITING & RESEARCH

GitHub Actions CI/CD

Documentation and research on pipeline automation, build, testing and containerized deployment.

- Study: <https://thrilling-lettuce-c76.notion.site/GitHub-Actions-f26aaaf7a1e24288a8fa7fa902ca5fdf>

TDD & Automated Testing

Research on automated testing, testable architecture and quality strategies in distributed applications.

- Study: <https://thrilling-lettuce-c76.notion.site/TDD-3c13ecbdeb574de5b8dcd9f83afea65c>

E2EE API Contract Encryption

Feasibility study on end-to-end encryption for API contracts, covering security, architecture and integration trade-offs.

- Study: <https://thrilling-lettuce-c76.notion.site/Estudo-de-Viabilidade-Criptografia-de-Contratos-de-API-E2EE-277af39e8feb80cf950dca4bd6ef4869?pvs=73>

SKILLS

Frontend:

React, Next.js, Angular, Vue, TypeScript, TanStack Query, Zod, React Hook Form, Zustand, Custom Hooks, Context API, React Native (Expo), SSR, BFF Pattern

Authentication:

Keycloak, Auth.js, Better Auth, Firebase Auth

Backend:

Node.js, NestJS, C#, .NET Core, ASP.NET Core, Go, Python, REST APIs, GraphQL, High Concurrency

Architecture & Distributed Systems:

Distributed Systems, Microservices, Clean Architecture, Hexagonal Architecture, DDD, CQRS, Saga, Event-Driven Architecture, System Design, API Design, Service Decoupling

ORM & Persistence:

Entity Framework, TypeORM, Prisma

Data & Messaging:

PostgreSQL, MariaDB, SQL Server, Oracle, MongoDB, Redis, Firebase, Kafka, RabbitMQ, Full-Text Search

DevOps & Cloud:

Docker, Kubernetes, AWS (EKS, RDS, SQS, S3), GCP, DigitalOcean, CI/CD, GitHub Actions, Pipeline as Code, Containerization, Nginx, Git

Quality Engineering:

TDD, Automated Testing, E2E Testing, Testable Architecture, Jest, Vitest, Playwright, Cypress, xUnit

Observability & Security:

Grafana, Datadog, New Relic, Structured Logging, Distributed Tracing, RBAC, API Security, LGPD, GDPR

CERTIFICATIONS

.NET Architecture Track TDC São Paulo 2024	<i>Sep 2024</i>
Node.js and JWT: token-based authentication Alura	<i>Sep 2022</i>
Next.js: exploring the framework Alura	<i>Aug 2022</i>
Scrum: agility in your project Alura	<i>Aug 2022</i>
NestJS: building a REST API with TypeScript Alura	<i>Jul 2022</i>

EDUCATION

Postgraduate Degree in Software Engineering and Systems Architecture UNINASSAU — microservices, Clean Architecture, DevOps, cloud (Docker/Kubernetes)	<i>Nov 2025 — Jul 2026 (in progress)</i>
Undergraduate Technology Degree in Systems Analysis and Development UNINASSAU	<i>Jun 2019 — Dec 2021</i>

LANGUAGES

Portuguese — Native
English — Professional Working Proficiency (B2/C1)
